DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 2, 4-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Khan et al.

Khan et al disclose a flexible circuit tape (104) having conductive layer and an aperture, a thermally conductive heat spreader (110) having a cavity, a semiconductor die (102), a thermally conductive die adapter (300) made of polymer (paragraph 0031, 0039), wherein elements in polymeric material includes carbon, nitrogen, oxygen, fluorine and silicon (according to material handbook), wire bonds (108, 122), an encapsulation (116), solder balls (106)(Fig 3a)

Re claim 2, see Fig 3b.

Re claims 4-7, see Fig 3c.

Re claim 8; see Fig 3d.

Re claims 9, 10, see col. 5, lines 4-6.

Art Unit: 2831

The teaching of Khan et al as discussed above does not disclose the die adapter made of silicon or silicon coated with solderable layer (re claim 1).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to use of silicon for the die adapter of Khan et al, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. In re Leshin, 125 USPQ 416.

Allowable Subject Matter

Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 15-23 are allowed.

Response to Arguments

Applicant's arguments filed 01-17-2005 have been fully considered but they are not persuasive.

Applicant argues (1) that Khan et al clearly fails to teach or suggest that the die adapter is made of silicon.

With respect to (1) Khan et al teach that a thermally conductive die adapter is made of polymer (paragraph 0031, 0039), wherein elements in polymeric material includes carbon, nitrogen, oxygen, fluorine and silicon (according to material handbook)

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
